

SECONDARY CLARIFIERS

A TRICKLING
FILTER CREATES
SETTLEABLE
SOLIDS FROM
SUSPENDED AND
DISSOLVED SOLIDS

TRICKLING FILTER

ROCK (OR PLASTIC)

HUMUS

HUMUS (SLOUGHING
BIOMASS) GOES TO
THE SECONDARY
CLARIFIER

TRICKLING FILTER CLARIFIER

- HUMUS IS HIGH IN BOD AND MUST BE REMOVED

- EXPECT TO PUMP 30-40% MORE SLUDGE FROM A SECONDARY CLARIFIER (THAN A PRIMARY CLARIFIER)

TRICKLING FILTER CLARIFIER

- DESIGNED MUCH LIKE
PRIMARY CLARIFIERS

- DETENTION TIME: 2-3 hours

- WEIR OVERFLOW RATE:
5,000-15,000 GPD/FT

- SURFACE LOADING: 300-1200
gpd/ft²

TRICKLING FILTER CLARIFIER SLUDGE

- LOOKS DIFFERENT THAN THE SLUDGE FROM THE PRIMARY CLARIFIER
- DARKER (but not gray or black)
- "FLUFFY" MATERIAL WITH LITTLE or NO ODOR
- MAY BE SENT BACK TO PRIMARY CLARIFIER or TO THE DIGESTER

ACTIVATED SLUDGE CLARIFIERS

NOTE: SOME ACTIVATED SLUDGE PLANTS DO NOT HAVE PRIMARY CLARIFIERS—ONLY SECONDARY

- DESIGNED TO HANDLE LARGE VOLUMES OF SLUDGE
- REQUIRE MORE OPERATOR ATTENTION (HIGHER CERTIFICATION LEVEL FOR ACTIVATED SLUDGE THAN a TRICKLING FILTER)

ACTIVATED SLUDGE CLARIFIERS ARE DESIGNED FOR...

- **DETENTION TIME: 2 – 3 hours**
- **SURFACE LOADING: 300-1200 gpd/ft²**
- **WEIR OVERFLOW RATE: 5,000 –
15,000 GPD/FT**
- **SOLIDS LOADING: 24-30 lbs/day/ft²**

SOLIDS LOADING RATE

- USEFUL FOR ACTIVATED SLUDGE SECONDARY CLARIFIERS
- INDICATES THE AMOUNT OF SOLIDS THAT CAN BE REMOVED DAILY FOR EACH SQ-FT OF SURFACE AREA

SOLIDS LOADING RATE

$SLR = \text{lbs of SOLIDS/day} / \text{ft}^2$

$$\text{lbs/day} = C \times Q \times 8.34$$

Where: C = Suspended Solids concentration in ppm; Q = flow in millions of gallons/day, and 8.34 is lbs/gallon

TYPICAL RANGE = 12 - 30 #/day/ft²

ACTIVATED SLUDGE CLARIFIER DESIGN:

DETENTION TIME: 2-3 HOURS

SURFACE LOADING: 300-1200 gpd/ft²

WEIR OVERFLOW RATE: 5000 -
15000 gpd/ft²

SOLIDS LOADING: 12 - 30 lbs/day/ft²

SLUDGE REMOVAL IN ACTIVATED SLUDGE SECONDARY CLARIFIERS

DIFFERS FROM PRIMARY
CLARIFIER OPERATION
BECAUSE SLUDGE
WITHDRAWAL IS
CONTINUOUS

SUCTION-LIFT CLARIFIER

SLUDGE VOLUME INDEX (SVI)

- A GOOD OPERATING TEST FOR SLUDGE CONSISTENCY
- RELATES THE SETTLEABLE SOLIDS TO THE SUSPENDED SOLIDS

SLUDGE VOLUME INDEX TEST

- 1 Liter of mixed liquor, settled for 30 minutes
- ON SAME BATCH, RUN SUSPENDED SOLIDS

$SVI, \text{ mL/gm} = \text{volume in mL of 1 gram (weight) of MLSS after 30 minutes}$

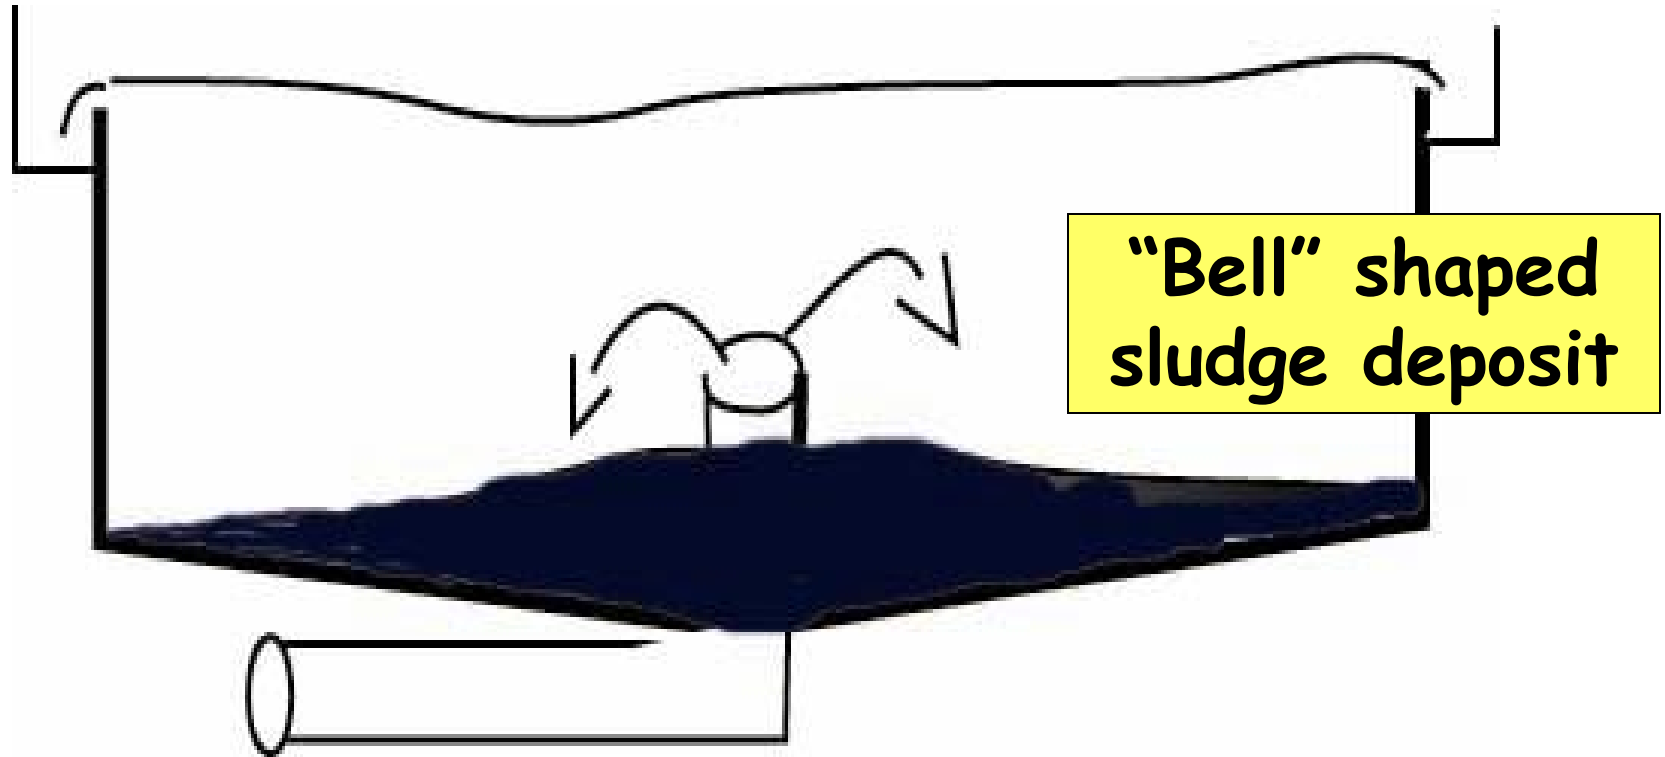

SVI EXAMPLE

FROM A SAMPLE OF MIXED
LIQUOR YOU DETERMINE:

SETTLEABLE SOLIDS = 610 mL/L
SUSPENDED SOLIDS = 5580 mg/L

$$\text{SVI} = 610 \text{ mL/L} / 5580 \text{ mg/L} \times 1000 \text{ mg/gm} = \underline{109} \text{ mL/gm}$$

SIGNIFICANCE OF SVI

$SVI \leq 80 \text{ mL/gm}$

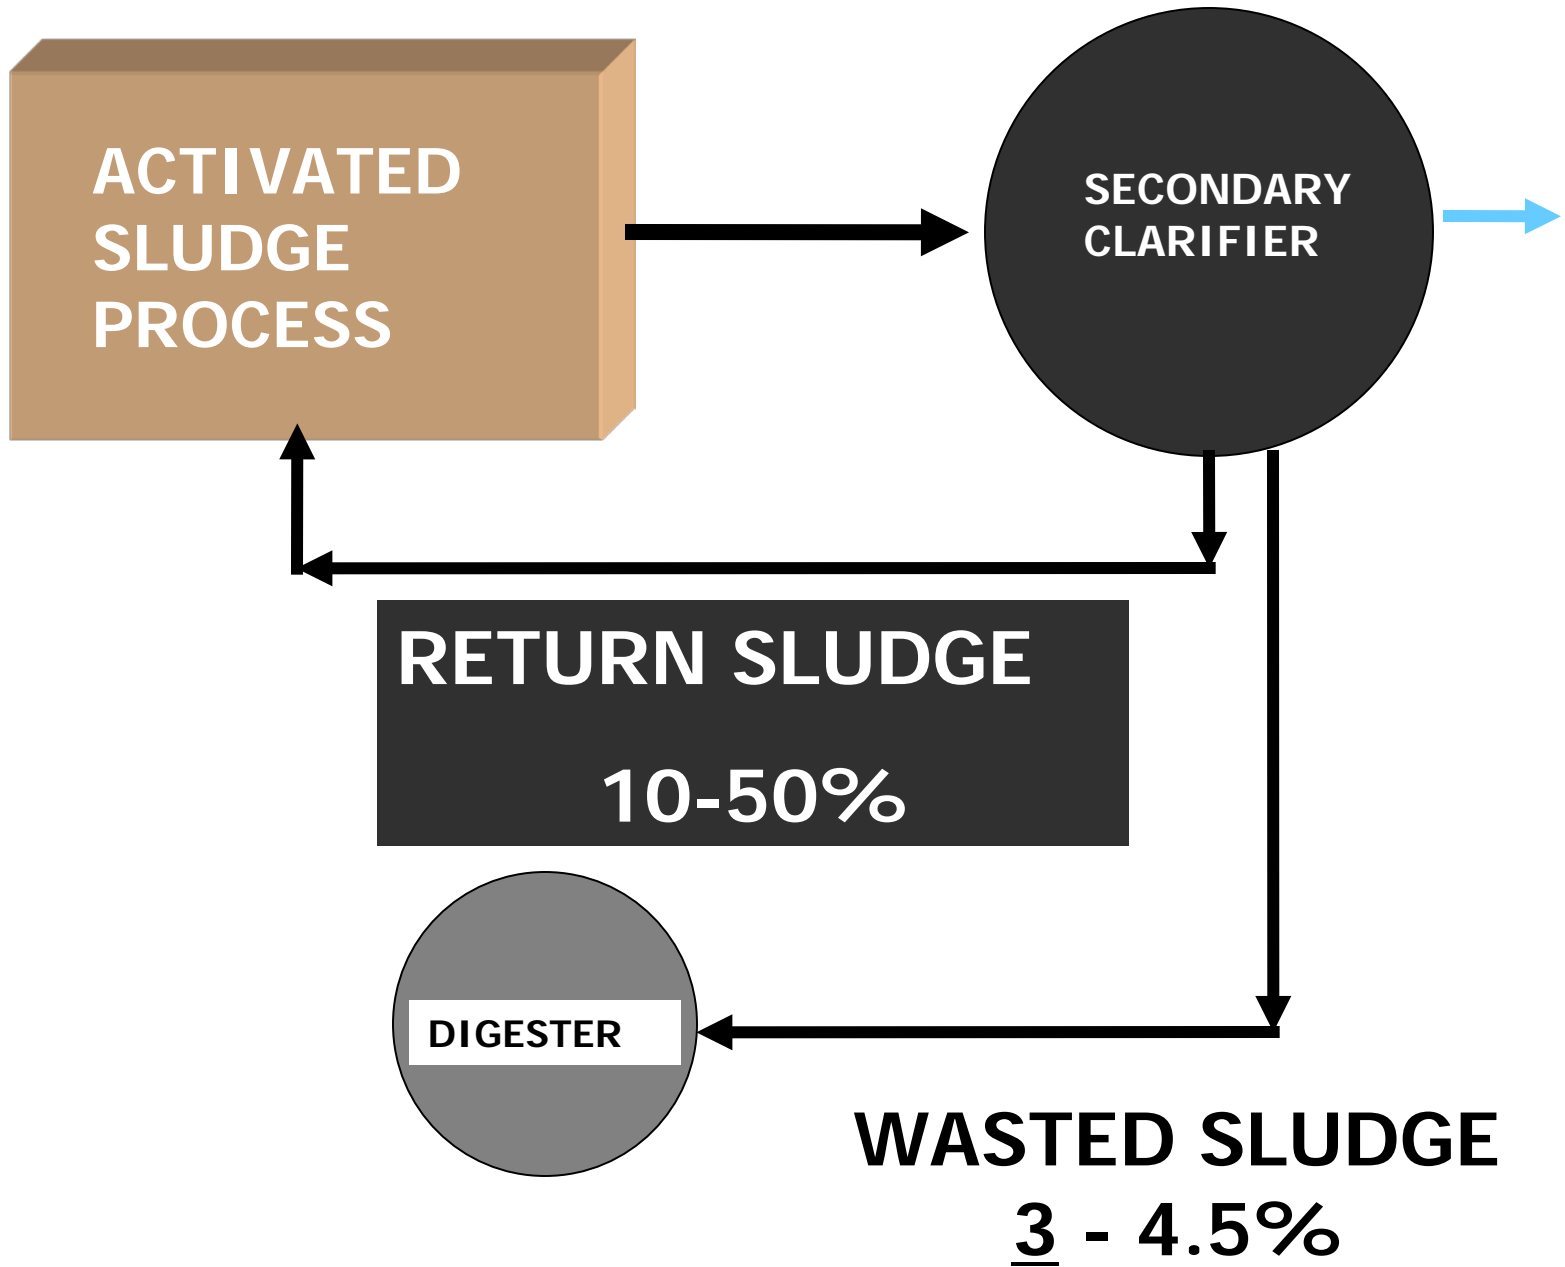

SIGNIFICANCE OF SVI

$SVI \geq \underline{250} \text{ mL/gm}$

**MORE EFFICIENT TO
PUMP SLUDGE FROM
CENTER OF CLARIFIER**

**IN THE CLARIFIER, THE
OPERATOR MUST
MONITOR...**

- **SLUDGE BLANKET**
 - **EFFLUENT
SUSPENDED SOLIDS**
- **RETURN SLUDGE FLOWS**

OPERATOR MUST MONITOR THE CLARIFIER EFFLUENT FOR...

- TURBIDITY
- DISSOLVED OXYGEN (O₂)
- pH, BOD, AMMONIA NITROGEN
(NH₃)

COMBINED SETTLING AND DIGESTION UNITS

- USUALLY CONSIDERED "PACKAGED TREATMENT PLANTS" BECAUSE THEY ARE FACTORY-BUILT AND SHIPPED TO THE SITE AS A PACKAGE

COMBINED SETTLING/DIGESTION

THESE
UNITS
ARE ALL
COPIED
FROM THE
IMHOFF
TANK

SETTLING

**GAS
VENT**

**SLUDGE
WITHDRAWAL**

**SLUDGE
DIGESTION**
